

EIGEN INGENUITY

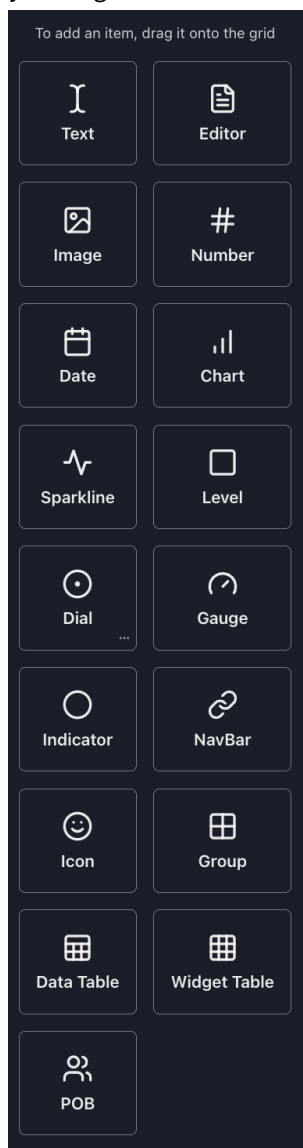

Product Information Sheet

Low Code

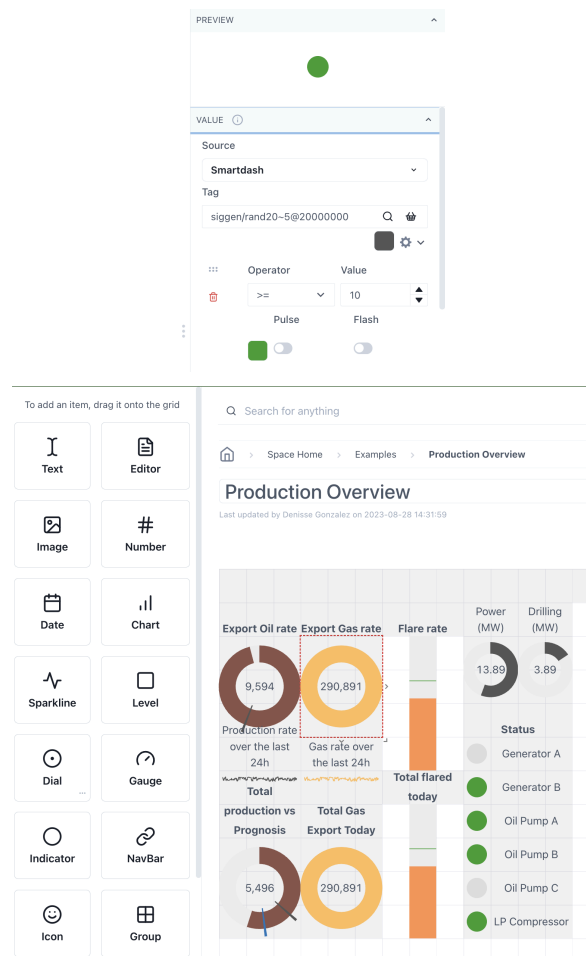

Taking care of the coding

Eigen Ingenuity has a built-in library of UI components that can be easily added to a dashboard page and configured without having to know any coding.

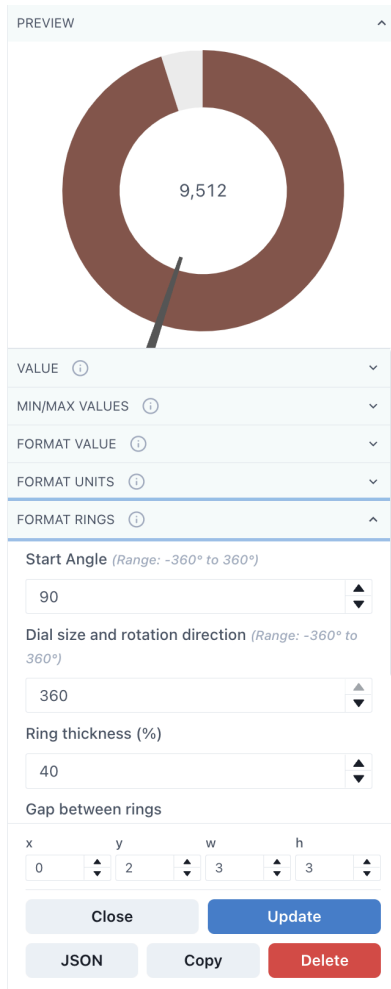

Users can select from a library of pre-built components to create their own content.

Components have an “Edit” mode with layout guides and access to the component controls.

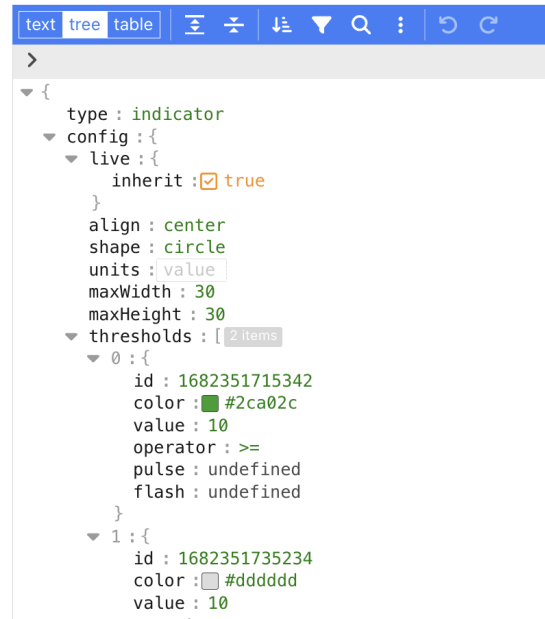

A Dashboard display in “Edit” mode. Here the user can change layout of the component, and which can be any of the options on the left arranged in freeform or within a grid.

Each component is fully configurable.

JSON Configuration

The “Settings” for a KPI component. The user can easily configure everything from the data source through to the size and colour of individual elements of the display.

Code if you want to

Low code doesn’t have to mean “no code”. If you want to edit the source code for a page, you can. For those confident in their coding this gives unlimited possibilities.
